

SHARJEEL AYUBI

Senior iOS Engineer | Tech Lead

+923349754841 | sharjeel.ayubi.007@gmail.com | Lahore, Pakistan

PROFESSIONAL SUMMARY

Results-driven Senior iOS Engineer with 8+ years of experience designing and delivering scalable, high-performance mobile applications across aviation, real estate and AI domains. Deep expertise in Swift, SwiftUI and Combine with a strong command of reactive programming, clean architecture and the full mobile development lifecycle. Proven track record leading cross-functional teams, owning end-to-end product development and driving engineering excellence through code reviews, automated testing and CI/CD pipelines. Known for clear cross-functional communication, mentoring engineers and thriving in remote Agile/Scrum environments across multiple time zones — consistently delivering with minimal supervision. Passionate about applying emerging technologies — including on-device AI and large language models — to build products that simplify and improve people's lives.

CORE TECHNICAL SKILLS

iOS Development: Swift, SwiftUI, Combine (Reactive Programming), UIKit, AVKit, ARKit, CoreML, Core Data, Core Location, PDFKit, MapKit, XCTest, Snapshot Testing, Apple Human Interface Guidelines (HIG)

Architecture & Patterns: MVVM, MVP, MVC, Dependency Injection, Protocol-Oriented Programming, SOLID Principles, Clean Architecture, Design Patterns (Factory, Observer, Singleton)

AI / ML: On-device RAG Pipelines, Vector Database, ObjectBox, Semantic Search, e5-small-multilingual Embeddings, CoreML, SwiftData, Server-side LLM Integration

Networking & Backend: REST APIs, JSON parsing, URLSession, Alamofire, AWS, Firebase, Push Notifications, WebSockets, OAuth 2.0, JWT, Keychain, Secure Data Storage, Encryption, Firebase Crashlytics

DevOps & Tooling: Xcode, Git, Azure DevOps, CodeMagic (CI/CD), Fastlane, Bitrise, Swift Package Manager, CocoaPods, Jira, Asana, Trello, Figma, SourceTree, Github Desktop

Additional Languages: Objective-C, Kotlin, Java, C++, C#, JSON, XML

PROFESSIONAL EXPERIENCE

Hazel Mobile

Senior iOS Engineer & Tech Lead *May 2025 – Present*

- Owned the end-to-end architecture and development of Xeno, an AI-powered document chat application built with SwiftUI and SwiftData, from ideation through production release.
- Designed and implemented a fully on-device Retrieval-Augmented Generation (RAG) pipeline, enabling semantic document search without server round-trips — significantly reducing latency and protecting user data privacy.
- Optimised memory management and eliminating retain cycles to improve reliability and application startup performance.
- Integrated a Vector Database and the e5-small-multilingual embedding model to power accurate, context-aware query matching across multilingual document corpora.
- Engineered a hybrid AI architecture combining on-device semantic retrieval with server-side LLM refinement to deliver high-quality, contextually relevant responses at scale.
- Led a team of engineers, defined architectural standards and enforced code quality through structured code reviews and scalability-focused design decisions.
- Drove adoption of SwiftData for local persistence, replacing legacy CoreData patterns and reducing model boilerplate by ~40%.
- Integrated Firebase Crashlytics for real-time crash monitoring and observability, reducing mean time to resolution for production issues.
- Managed App Store submission, release management and versioning workflows.

Volocopter GmbH | Remote / Germany

Senior iOS Engineer *April 2023 – April 2025*

- Contributed to a mission-critical pilot application for the VoloCity air taxi, delivering real-time flight routes, battery telemetry, weather data, weight-balance analysis and flight scheduling used by pilots.
- Collaborated with cross-functional teams across Germany, leading technical analysis, sprint planning, and feature breakdown to ensure on-time delivery within Agile/Scrum workflows.
- Made key architectural decisions for scalable SwiftUI + Combine codebase, decomposing complex features into independently testable modules to improve maintainability and velocity.
- Implemented comprehensive automated testing (unit, UI, snapshot) achieving high code coverage and reducing production regressions across release cycles.
- Debugged and resolved performance bottlenecks in a safety-critical real-time data application, improving reliability and application startup performance.
- Authored technical documentation and improved internal engineering workflows, reducing onboarding time for new team members by an estimated 30%.

Coeus Solutions GmbH

iOS Engineer *April 2021 – March 2023*

- Led a team of iOS developers in delivering 4ART — a fintech-adjacent NFT creation and Artwork registration platform supporting Ethereum, Tezos and Binance blockchains with real-money transactions.
- Spearheaded development of the in-app Marketplace feature, owning requirements gathering, technical design, API integration and final delivery.
- Implemented secure authentication flows and data protection mechanisms for real-money transactions, applying encryption, OAuth 2.0 and Keychain-based secure storage to protect user credentials and wallet data.
- Integrated ARKit for immersive artwork previewing, NFC for physical artwork authentication and App Clips for instant onboarding without full app installation.
- Managed stakeholder communication, translated product requirements into pragmatic technical solutions and consistently shipped new features ahead of deadlines.
- App live on the App Store with 4.0+ average rating across DE/EU markets.

Norgic AB

iOS Engineer *April 2020 – March 2021*

- Built Mustard (Real Estate) from the ground up using SwiftUI and Combine — a full-featured property discovery platform supporting landlord, tenant and co-applicant workflows with complex search and ad management.
- Drove Agile delivery end-to-end: client communication, edge-case analysis, API contract definition with backend and Android teams.
- Added key features and maintained Togee (social screen-sharing app) including voice/video calling and real-time messaging modules.

Clustox

iOS Engineer *January 2019 – March 2020*

- Developed iDecore, an ARKit 2.0-based furniture placement app enabling real-world 3D object positioning, scaling, and relocation.
- Built Study Buddy for macOS using PDFKit — a productivity tool with multi-color highlighting, search, image annotation, and a quiz mode for hidden content review (live on the Mac App Store).
- Built Interakt, a short-form video social platform using AVFoundation and AWS, supporting recording, upload, feed, and engagement features similar to TikTok.

Ozi Technology

Senior Game Developer *January 2016 – February 2018*

- Developed 17 iOS and Android games in Unity3D from concept through testing and release, building strong foundations in software architecture, product ownership, and mobile application lifecycle management.

EDUCATION

FAST-NUCES Lahore | 2011 – 2015

Bachelor of Science in Computer Science

KEY ACHIEVEMENTS & HIGHLIGHTS

- Architected on-device AI RAG pipeline — delivered production-grade AI application without reliance on cloud inference for core retrieval, enhancing privacy and performance.
- Led mission-critical aviation software for Volocopter — contributed to flight-safety-adjacent real-time systems with zero-tolerance for defects, instilling rigorous testing discipline.
- 8+ years of continuous iOS expertise — from game development to real estate, aviation and now AI-powered apps; demonstrates adaptability, full lifecycle ownership and technology leadership.
- Multi-platform, multi-domain delivery — applications shipped across iOS, macOS and Android with App Store presence in EU, US and Pakistan markets.

INTERPERSONAL SKILLS

Team Leadership · Cross-functional Communication · Mentoring & Coaching · Problem Solving · Attention to Detail · Agile / Scrum Collaboration · Works Independently · Flexible & Adaptable · Committed to Delivery
